## Bellow (separated by three empty lines)

Emojis                      
         

Font Awesome:

 [twitter.com/cloudogu](https://twitter.com/cloudogu)

 [github.com/cloudogu](https://github.com/cloudogu)

# To the right (separated by `---`)

## Syntax highlighting

```
String hello = "world";
```

## Quotes:

A container image is a lightweight, stand-alone, executable package of a piece of software that includes everything needed to run it: code, runtime, system tools, system libraries, settings.

# Column layouts

Column 1

Column 2

## Separate files are placed to the right

The order is sorted alphabetically, by default. You can customize this by creating a `slides.html`!

# Images

Image via Markdown

The images are floating right and left of this text via css

The image bellow is loaded lazily. It also increases on hover and displays a tooltip

# Font

- Normal
- red

Line Break after two empty blanks

- Smaller text

# Ordered List

- 1 Ordered
- 2 List

Link to [previous slide](#) (by id)

# Video

This text fits the slide

# Auto

# Auto

# Animate

you can transition things like position, font-size, line-height, color, background-color, padding and margin.

See [docs](#).

# This slide is not printed

Because of `excludeLocation="print-pdf"` in `index.html`.

See [print view](#)

By the way,

- the other way round also works, using `includeLocation`.
- Note that `location` is evaluated as regex!
- See [index.html](#) for implementation details.
- To hide parts of a slide in printing use `class="state-background"`.
